“COMBAT READY” FIREFIGHTING
FIREGROUND PROVEN TIPS, TECHNIQUES & DRILLS

Fire Engineering[®]

Note: these 2 photos show a dramatically different view of a potential fire building. From the front, perhaps the illusion of a 2-story building. A quick look at the corner yields a dramatically different viewpoint. Note the added signage & structure attached to the original building parapet and roof. This signage must not be overlooked. Any fire entering the cockloft space will dramatically impact the ability of the building to carry the additional load of the massive diamond-plate sign. Also to note, placing a ladder to the front of the sign for roof access would result in a 10' drop from the ladder down to the roof and attempting access from the corner may be delayed due to razor/barbed wire.
