Back to Basics

Fire Service Ops with Elevators

Always retrieve the keys from the Knox Box, use the company inspection as an opportunity to check the keys for compliance and number, add additional keys for multiple companies to operate within the structure

Once the system is in fire service operations, insert the key into the control panel inside the car, again turn to on and now you have full control of the car, note that the doors are not automated and will require a full hold of the button "OPEN" and "CLOSE"

To take control of the elevator insert the key into the fire service slot and turn to "ON" this will return all cars on the system to the main level or level of the fire control panel
*Note upon completion of the operation return to normal function by turning the key to RESET
